

OPHTHALMIC INSTRUMENTS

PRESS RELEASE 02/06/2026

Healthy Lids for Life!

BiB Ophthalmic Instruments have invested in a “Patent and Licencing Agreement” with the American based **BlephEx LLC** for an undisclosed sum.

Blephex is a professional in-office solution that completely removes the biofilm and demodex from the eye structure and lid margins and is an essential first line treatment for blepharitis and dry eye disease.

Tim Baker CEO of BIB commented “this is fantastic news for Optometric and Ophthalmology based dry eye clinics and patients alike throughout the UK and Northern Ireland.

The new agreement will allow BlephEx to reach a much wider and needed audience”.

“The new structure allows us to source the product direct from the factory, vastly streamlining the current supply chain and in turn making the BlephEx device and consumables more affordable whilst providing improved turnaround times”.
