What product is right for my patient?

The ZocuFoam Eyelid & Facial Cleanser, ZocuWipe Eyelid Cleanser & Moisturiser and ZocuShield Syringe are suitable for patients suffering from any of the following:

- 1. Dry Eye Disease**
- 2. Demodex**
- 3. Inflammation (Biofilm induced ocular surface and eyelid inflammation)**
- 4. Dry, flaky skin**
- 5. Itchy eyes**

When to dispense?

The ZocuWipe, ZocuFoam and ZocuShield should be dispensed to patients suffering from eyelid inflammation, Dry Eye Disease, Demodex and associated symptoms. Also, best dispensed to patients after your in-practice ZEST treatment to continue their Dry Eye therapy at home, to maintain eyelid hygiene in-between practice visits.

FAQ's

What is Zokrex™?

There's a new patented technology called Zokrex™ that utilises activated Okra complex derived from fresh Okra to address the underlying inflammation that causes a host of eye-related problems. From Dry Eye to Styes, Zokrex™ is designed to provide immediate relief and promote healing in a way that is gentle

and effective. Zokrex™ is the foundation of every Zocular™ product, meaning you can experience the powerful benefits of activated Okra complex for yourself, without a prescription.

What is Okra?

Okra is a well-known topical vegetable grown worldwide. Due to abundant bioactive compounds, such as polysaccharides, the antibacterial, anti-inflammatory and immune regulatory effects of Okra have been proven and are widely applied in the cosmetics industry, where the safety and efficacy of Okra has been established. Due to the curative and medicinal effects of Okra, clinical studies show that it may confer therapeutic effects in patients with Blepharitis and Dry Eye.

How does the ZocuFoam Eyelid & Facial Cleanser work?

The patented Zokrex system, with activated Okra polysaccharide complex, uses Micellar Zocusome technology for deep cleansing of the eyelids and lashes. The foaming solution leaves the skin feeling soothed and refreshed, whilst gently removing a build-up of debris on the lids and lashes to help manage dry, sore, gritty eyes.

How does the ZocuWipe Eyelid Cleanser & Moisturiser work?

ZocuWipe Eyelid Cleanser & Moisturiser is designed to effectively remove debris from the eyelids and the base of the lashes without irritation, keeping eyes clean and healthy. Contains a patented Zokrex system with activated Okra polysaccharide complex, each wipe releases micelles, namely, Zocusomes, to cleanse and soothe the eyelids, lashes and face.

How does the ZocuShield Gel work?

ZocuShield is an innovative gel containing activated Okra polysaccharide complex that penetrates through the biofilm to cleanse and nourish the eyelids. With its advanced formulation, ZocuShield™ is the perfect solution for a patient looking for an effective and easy way to care for their eye health. Apply once or twice daily for instant, lasting results.

How to use?

ZocuWipe: use 1 wipe for both eyes, ideally in the morning for all-day relief. Your patient can use one rinse-free ZocuWipe for both eyes. Place the wipe over the index and middle finger and gently wipe from nasal corner across the lash line. The wipe can then be turned over to the other side and repeated the other eye.

ZocuFoam: use in the morning and/or night. ZocuFoam can be used once or twice a day depending on the severity of Dry Eye symptoms. Your patient should apply one pump onto the fingertip and gently apply to the lash line of both eyelids. Using lateral motions, rub the foam across the lash line for 10-15 seconds. The foam should be left on closed eyelids for 30-40 seconds then rinsed with water.

Zocushield: Ensure the bottle is in its unlocked position by turning the inner tube counter-clockwise. Press down on the inner tube slowly to dispense one drop of gel onto the tip of the index finger. Do not completely depress the inner tube, which will result in too much gel being dispensed. Spread the ZocuShield gel drop across the lash line, using the index or middle finger to massage the gel across the lash line using lateral moving for 10-15 seconds. Advise your patient to blink several times while massaging the gel across the lash line to allow the gel to coat both the upper and lower lashes.

After 10-15 seconds of gentle scrubbing, massage any remaining gel across the skin until the gel becomes almost dry. No rinsing is needed with ZocuShield gel.

For optimal results, we recommend incorporating both products in to a daily 5-step eyecare regime.

HEAT using The Eye Doctor Antibacterial Hot Eye Compress

CLEANSE using ZocuFoam or ZocuWipe

REVIVE using The Eye Doctor Eye Drops or Mist

SUPPORT with The Eye Doctor Premium Eye Health Food Supplements
