

NEW The Eye Doctor Advanced Triple Action Eye Drops is ready to set a new standard in addressing the underlying causes of dry eye and providing effective, lasting treatment. This new product shows a significant advancement in dry eye treatment, demonstrating our commitment to innovation and improving eye care.

The Eye Doctor Advanced Triple Action Eye Drops is designed to combat moderate to severe dry eye through long-lasting treatment.

An independent patient survey had revealed that 83% of those who took part preferred The Eye Doctor Advanced Triple Action Eye Drops to their usual eye drops, with 67% finding the new drop easier to use and 92% preferring the translucent bottle.

Here are the key features and benefits of this innovative eye drop solution:

Triple Action Formula: The eye drops target all three layers of the tear film—aqueous, lipid, and mucin—providing a complete approach to treating dry eye.

Microemulsion Lipid-Based Formula: Lipid-based formulations have the ability to adhere to the ocular surface and form a protective layer. This helps in retaining moisture and reducing evaporation of tears, which is particularly beneficial for individuals experiencing dry eye symptoms.

Patented Non-Blurring DEMET® Technology: A patented technology that prevents blurring upon application, making this product suitable for individuals with sensitive eyes and those who wear contact lenses.

Clinical Efficiency: The product is clinically proven to strengthen the tear film and repair the ocular surface, aiding in the recovery of cells damaged by inflammation.

Long-Lasting Relief: Unlike temporary solutions, these eye drops offer sustained relief if you're suffering from dry eye, thanks to the combination of high molecular weight hyaluronic acid and trehalose.

Key ingredients include:

Trehalose: A natural sugar known for its ophthalmic benefits, which aids in protecting and hydrating the eyes.

Sacha Inchi Seed Oil: Derived from an Amazonian plant, this oil helps in moisture retention, providing long-lasting relief.

Hyaluronic Acid and Glycerol: These ingredients contribute to lubrication and moisture, enhancing the overall comfort of the eyes.
