

NuLids Pro: The Dental Model for Eye Care

NuLids[™]
PRO

Dry eye used to be a frustrating condition for both patients and doctors, limited treatments, high costs, and poor patient loyalty. But that's changing. Inspired by the dental model (cleaning every six months, brushing daily), NuLids is bringing a similar routine to eye care with its at-home and in-clinic eyelid hygiene systems.

What is NuLids Pro?

NuLids is a mechanical eyelid hygiene system designed for in-practice use. It safely and effectively treats dry eye, blepharitis, meibomian gland dysfunction (MGD), and Demodex-related conditions by:

- Using a sub-sonic oscillating tip over closed eyelids
- Liquefying hardened meibum and unblocking glands
- Stimulating circulation and reducing inflammation
- Removing debris and biofilm with minimal splatter

Results That Matter

- 2x improvement in symptoms in 30 days
- 82% increase in Meibomian Glands Yielding Liquid Secretions (MGYLS)
- 93% reported more comfortable eyes in consumer studies
- Safe: Over 2 million at-home uses with zero FDA-validated complaints

Why It Works

- Parallel oscillation reaches 7-8mm of eyelid surface
- Gel enhances vibration transmission (like ultrasound)
- "Brake" mechanism stops the device if pressure is too high
- Disposable tip design minimises hygiene risk

Real Patient Impact

- Improved comfort, longer contact lens wear, less reliance on drops
- Lid redness, swelling, and morning stickiness reduced
- MGD, Demodex, and post-surgical dry eye outcomes improved
- Works well for chronic blepharitis where other treatments failed

NuLids Pro is changing the way dry eye is managed, just like the toothbrush revolutionised dental hygiene. By integrating NuLids Pro into clinical protocols, both patients and practices benefit from healthier eyelids, clearer vision and an improved quality of life.
